

A V Gauge & Fixture

Mission Statement

A V Gauge & Fixture was established June 4, 1985 to design and manufacture custom gauges and fixtures that meet or exceed the expectations of our customers, as well as our own. Our goal is to continuously improve our effectiveness and efficiency in the areas of quality, reliability, commitment and dedication to professional practices. We are also devoted to having all of the necessary resources available including knowledgeable, competent, reliable and flexible personnel using the latest in technological systems and equipment. Our high standards of quality will be maintained through our comprehensive inspection facility and consistent inspection capabilities. To ensure successful growth as a team into the future, we will follow the Health & Safety Act and maintain the ISO-9001 Registration as well as the ISO 17025 Accreditation.

Our focus on quality extends beyond our products and processes to the communities where we do business. Through a combination of financial contributions and volunteer efforts, A V Gauge & Fixture actively supports programs that result in sustainable charitable, educational and environmental improvement, all vital components of a thriving community.

Regards,

A V Management
